

Apple iPhone

An Introduction to Seeing AI

This document has been designed to introduce you to the features found in the popular Smartphone app for an Apple iPhone, called Seeing AI, by Microsoft.

Assumptions

A few assumptions have been made in the creation of this document. They are as follows:

- The latest version of Seeing AI has been downloaded and installed onto your iPhone. At the time of writing (05 January 2026), the latest version is 5.6.1.
 - You are familiar with navigating the various screens found on your iPhone.
 - Your iPhone is connected to the internet.

Note 1: The instructions given in this document have been created using an Apple iPhone 13 Pro, running iOS 26.2. If you are using a later version of iOS, you may find some minor differences. However, it isn't anticipated that you will!

What is Seeing AI?

Seeing AI, by Microsoft, is a free app that narrates the world around you. Designed with, and for the blind and low vision community, this ongoing research project harnesses the power of AI (Artificial Intelligence) to open up the visual world.

What Can Seeing AI Do?

Seeing AI is a talking camera application, which can help with everyday tasks for people who are blind or have low vision. This takes the form of several features, known as channels, each with different intended functions. For example, the Short Text channel uses OCR (Optical Character Recognition) to read the text in-front of the camera, whereas the Scene channel uses computer vision to describe what's in a photo. The channels are discussed later in this document, but most of them use AI to help describe text, people and objects in the environment around you.

Opening Seeing AI

To open Seeing AI, first locate its icon on the Home Screen and activate it. Upon doing this, the Seeing AI application will be opened.

An alternative method of opening Seeing AI, is to use Siri. Simply invoke Siri and say "open Seeing AI". Upon doing this, the application will be opened!

When Seeing AI is first opened, the Help page for the currently selected feature will be displayed. By default, this will be the Read feature. This page outlines how the feature works and also contains a link to a video of the feature in action. To close the help page, activate the "Done" button, situated at the top right corner of the screen. Upon doing this, the main screen will be displayed.

Description of the Seeing AI Main Screen

At the top left corner of the Seeing AI main screen, you will find the Menu button. When this button is activated, a number of options are available, including Help, Feedback and Settings. At the top right corner of the main screen, you will find the Quick Help button, which when activated, provides an overview of the currently selected feature.

At the bottom of the Seeing AI main screen, you will find three tabs. From left to right, these are "Read", "Describe" and "More". When a tab is selected, various controls are made available just above the row of

tabs. The Read tab contains options for reading printed and handwritten text. The Describe tab allows you to take a photo and have it described. The More tab contains a range of features, known as "Channels", including product recognition, currency recognition, colour recognition and light detection.

The area between the Menu and Quick Help buttons and the tabs is dedicated to the various controls for the currently selected tab, as well as the text from documents, food items etc. This part of the screen takes up approximately 70% of the available screen space.

Following is a description of each tab and its purpose. Most of the information has been taken directly from Seeing AI's help system!

The Read Tab

This tab assists with printed text in the environment around you, as well as text from printed documents and handwritten notes.

When the Read tab is activated, three buttons appear just above the row of tabs. At the centre, just above the "Describe tab", you will find the "Take Picture" button. To the left of the Take Picture button, situated at the left side of the screen, you will find the "Document Alignment" button. To the right of the Take Picture button, situated at the right side of the screen, you will find the "Recognition" button, which displays the current language being recognised.

There are two ways of reading text. For completeness, both methods are described as follows.

The Short Text Feature

This is the default feature. It allows you to hold the rear-facing camera on your device over some text and have it automatically read to you. As new text comes into view, it will also be read out loud. Whilst reading out loud, Seeing AI might start reading from the beginning again, if the camera captures a clearer image of the text. This is known as recalibrating! For best results, hold your device approximately 12 inches away from the text. For larger text sizes, hold the device further away!

The main reasons for using the Short Text feature, are to find out quickly what a document is about, what a food item is or to find out what a sign on a door or wall says. It can also be used to quickly ascertain whether or not post is important or not.

The Short Text feature can be a little frustrating to use at times, due to the text potentially being repeated over and over. So it might be better to use the Document feature, described next, instead.

The Document Feature

To switch to the Document feature, activate the "Document Alignment" button, situated at the left side of the screen, to the left of the Take Picture button. Upon doing this, the Short Text feature will be temporarily disabled. You can now take a photo of the text for a more accurate description.

With the screen on your iPhone facing you, the rear-facing camera will be at the top right corner on the back of the device. Place it on the centre of the page containing the text, then slowly move it away. When Seeing AI has detected all of the text, it will say "hold steady" and a photo will automatically be taken. Whilst the information is being processed, you will hear a series of tones. When the tones stop, the text from the document will be displayed on screen.

Note 2: When capturing an image of a document, Seeing AI will guide you with camera placement until all edges of the document are visible and the photo is taken. Make the necessary adjustments until you hear "hold steady".

You can get Seeing AI to read the captured text aloud by activating the "Play" button, situated at the bottom right corner of the screen. When the Play button is activated, the name of the button changes to become the "Stop" button.

When the Pause button is activated, three additional buttons appear on the screen, to the left of and just above the Stop button. From left to right, these are "Skip Back", "Pause" and "Skip Forward". You can use the "Skip Back" and "Skip Forward" buttons to move through the text one sentence at a time. The "Pause" button, when activated, changes to

become the "Resume" button. The Pause/Resume button is most useful for stopping the reading and restarting it from the same place you paused it! The other two buttons are a little unreliable at doing what they are supposed to do!

To stop the reading, activate the "Stop" button. Upon doing this, the speech will stop and the Stop button changes to become the "Play" button once more. When you activate the "Play" button again, the reading will start from the beginning!

In addition to having the text read from beginning to end, you can ask Seeing AI questions about the text in the document. To do this, activate the "Ask Seeing AI" button, situated at the bottom left corner of the screen. Upon doing this, the Ask Seeing AI screen will be displayed. At the bottom of this screen, you will find the Virtual keyboard. Situated directly above this, you will find a text field, into which you can type your question.

For example, if you have taken a photo of a menu, you could ask the question "what are the desserts", by typing your question into the text field and then activating the "Send" button, which is situated above the letter "P" on the Virtual keyboard. A few seconds later, Seeing AI will provide you with information specific to the Desserts only and read it aloud. Be aware that answers are AI generated, so mistakes are possible.

To close the Ask Seeing AI screen, activate the "Back" button, situated at the top left corner of the screen.

When you have finished with the current page, you can take a photo of another page by activating the "Add Page" button, situated near the top right corner of the screen. Alternatively, you can close the document by activating the "Back" button, situated at the top left corner of the screen.

Note 3: The Document channel works best when there is a high contrast between the page and the background, such as a white page on a dark surface. Sometimes, Seeing AI won't offer you suitable guidance when lining up the text. If this is the case, you can activate the Take Picture button to capture the text manually. If the page has no text on it, you will receive a message stating that no text was found.

Reading Handwriting

The Document feature also allows you to take a photo of handwritten text and have it read to you.

With the screen on your device facing you, place it on the centre of the page containing the handwriting, then slowly move it away. When Seeing AI has detected all of the text, it will say "hold steady" and a second or two later, a photo will be taken. Once the handwriting has been processed, the results will be displayed on screen in text format.

You can get Seeing AI to read the text by activating the "Play" button, situated at the bottom right corner of the resulting screen. Upon doing this, the "Play" button changes to become the "Stop" button.

The Handwriting feature is still in development and will undoubtedly improve in its accuracy as time goes by. For now, it's a useful feature, especially for reading things like Christmas and Birthday cards.

Note 4: the Handwriting feature requires the text to be the right way up! Recognition accuracy will depend on the handwriting style, which will vary greatly from person to person. Don't rely on this feature to read your Doctor's handwriting!

Changing the Voice and Reading Speed

One thing you might wish to do for the reading of text, is the change the voice, or adjust the reading speed. To change the voice and reading speed, follow these steps:

1. Activate the "Menu" button, situated at the top left corner of the screen. Upon doing this, a menu will be displayed.
2. Locate and activate the "Settings" button. Upon doing this, the Settings screen will be displayed.
3. In the Settings screen, locate and activate the "Select Voice" button. Upon doing this, a list of available voices will be displayed.

The voices are a combination of human-sounding voices and ones which have been designed for fun. You won't know what a voice sounds like until you use the Short Text or Document channel!

4. Activate the button for the voice you wish to use.
5. Activate the "Back" button, situated at the top left corner of the screen, to save your choice and return to the Settings screen.

Now for the reading speed!

6. Locate the Speech Rate slider.
7. Slide the slider, until you have selected the desired speech rate. For reference, 40% is a pretty comfortable reading speed!
8. Finally, activate the "Back" button, situated at the top left corner of the screen, to close the Settings screen and return to the Seeing AI main screen.

The Describe Tab

This tab features the latest Artificial Intelligence for describing the environment, including photos you take, or media saved on your device such as images and videos. You can also ask follow-up questions to get more details. This work is still experimental, so please use caution.

When the Describe tab is activated, four buttons appear just above the row of tabs. At the centre of the screen, you will find the "Take Picture" button. To the left of the Take Picture button, situated at the left side of the screen, you will find the "Face Recognition" button. To the right of the Take Picture button, Situated at the right side of the screen, you will find the "Switch to Front Camera" button. There is one more button which is available. This is the "Browse Photos" button. This button is situated between the "Take Picture" and "Switch to Front Camera" buttons.

To take a photo, point the rear-facing camera on your device at the object or scene you want to be described. Then, activate the "Take Picture" button. Upon doing this, Seeing AI will process the information.

Whilst the information is being processed, you will hear a series of tones. When the tones stop, Seeing AI will describe what you captured.

If you want to find out more about the contents of the image, activate the "Ask Seeing AI" button, situated at the bottom left corner of the screen. Then, in the "Ask a question" text field, type your question and activate the "Send" button. A few seconds later, Seeing AI will provide you with more details about the image.

To close the Ask Seeing AI screen, activate the "Back" button, situated at the top left corner of the screen. Upon doing this, you will be returned to the description of the picture you took.

Saving a Photo

You can save a photo, along with its description, by activating the "Save Photo" button, situated to the right of the Ask Seeing AI button. When you do this, you will be prompted to allow Seeing AI to use your location. Your location is used to find nearby routes to navigate, and is included when saving photos to your device. There will be a few locations to choose from! When you have selected a location, activate the "While using App" button. Upon doing this, you will receive a message stating that your photo was saved successfully.

Exploring a Photo

Seeing AI can break Photos down into individual elements. This allows you to explore a photo, using one finger, to find out where certain things are in the scene.

To explore a photo, activate the "Explore" button, situated towards the bottom right corner of the screen. Upon doing this, Seeing AI will play a sound to indicate that the photo is being prepared for exploration. After the sound has stopped, you can explore the screen by dragging one finger around the screen. As your finger passes over an element, Seeing AI will tell you what that element represents in the photo. As you navigate the screen, a high pitched "ding" sound will play when an element is encountered.

To close the Exploration screen, activate the "Back" button, situated at the top left corner of the screen. Upon doing this, you will be returned to the description of the picture you took.

Sharing a Photo

It is possible to share a photo, or the description of that photo, with others. To do this, activate the "Share" button, situated at the bottom right corner of the screen. Upon doing this, you will be prompted to choose what it is you want to share. The options are "Share Image" or "Share Text". Upon choosing the appropriate option, a list of names you have recently communicated with will be displayed, and beneath this list, a list of the most popular apps you can use to share the photo or description.

From the list of apps, choose either Messages, Mail or WhatsApp (if you have it installed). Upon doing this, the image or description will be attached to the outgoing communication. You can now compose your message and send it in the usual way. When the message has been sent, you will be returned to the description of the photo you took.

To close the description of a photo, activate the "Back" button, situated at the top left corner of the screen. Upon doing this, you will be returned to the Seeing AI main screen.

Note 5: Image descriptions and responses are AI-generated, so mistakes are possible.

Describing Photos and Videos

Seeing AI can describe photos and videos using advanced AI. At present, the descriptions are pretty good, allowing you to identify what the photo/video represents and perhaps allowing you to remember where it was taken. In time, it is anticipated that AI will be able to tell you the names of people in a photo/video and maybe the names of well known landmarks, buildings etc.

Describing Photos

To have Seeing AI describe a photo, follow these suggested steps:

1. Activate the "Browse Photos" button, situated to the right of the "Take Picture" button. Upon doing this, the Photos application on your iPhone will be opened and all of your photos will be available.
2. Locate and activate the photo you would like to be described. Upon doing this, you will return to the Seeing AI app and the photo will be processed and then described!

Note 6: Depending on the complexity of the image, it could take a little while for Seeing AI to process it. Whilst the image is being processed, you will hear a series of repeated tones. When these tones stop, the image is ready to be described.

3. If you want to find out more about the photo, you can ask Seeing AI a question about it. For example, "tell me more about the tall building", or "tell me more about the boats on the water". To do this, activate the "Ask Seeing AI" button, situated at the bottom left corner of the screen. Then, in the "Ask a question" Text Field, type your question, then activate the "Send" button! A few seconds later, Seeing AI will display the information and read it aloud.
4. To close the Ask Seeing AI screen, activate the "Back" button, situated at the top left corner of the screen. Upon doing this, you will be returned to the description of the photo.
5. When you have finished with the photo, activate the "Back" button, situated at the top left corner of the screen, to return to the Seeing AI main screen.

Describing Videos

Seeing AI can now provide descriptions of videos you have taken with your iPhone, as well as videos that have been sent to you!

To have Seeing AI describe a video, follow these suggested steps:

1. Activate the "Browse Photos" button. Upon doing this, the Photos application on your iPhone will be opened and all of your videos will be available.
2. Locate and activate any video. Upon doing this, the video will be loaded into the Seeing AI app.
3. Next, locate and activate the "Describe" button. Upon doing this, the video will be analysed and processed.

Note 7: It can take as long as a couple of minutes for Seeing AI to analyse the video and process it, so be patient!

4. When the video has been processed, it will begin to play. Seeing AI will describe various aspects of the video, in the gaps between spoken audio! You can pause, rewind or fast-forward the video using the "Skip Back", "Play/Pause" and "Skip Forwards" buttons, situated at the bottom of the screen.
5. When you have finished with the video, activate the "Back" button, situated at the top left corner of the screen, until you are back in the Seeing AI main screen.

The More Tab

When the More tab is activated, two rows of icons are displayed just above the row of tabs. Each icon represents a channel. From left to right, the icons in the first row are: Product, Person, Currency and Find My Things. The icons in the second row, again from left to right, are: World (Pro models only), Colour and Light.

To choose a channel, simply activate the icon which represents the channel you want to use. If the channel you chose is one you haven't used before, the help page for that channel will be displayed. You can close this page by activating the "Done" button, situated at the top right corner of the screen.

Following is a description of each channel available in the More tab.

The Product Channel

The product channel is represented by an icon at the bottom of the screen, depicting a bar code. It allows you to recognise products based on various types of codes printed on the packaging, including bar codes. These are the most common type of product code, and may be found on the back or bottom of a container.

Some products, including some that are manufactured by Unilever, feature an accessibility enhanced QR code with a special border around it, which is easier to detect. These are found on the front of the packaging.

To scan a bar code, first activate the icon for the Product channel. Then, hold the rear-facing camera over the item and Seeing AI will guide you audibly with the camera placement until the code is detected. Move your device over the product until you hear beeps that indicate a code is nearby. Starting further away and slowly moving the device closer works best. The faster the beeps, the closer you are to the code. In the case of accessibility enhanced QR codes, the distance will also be announced.

- When a barcode/QR code is detected, Seeing AI will say the product name.
- If additional information about the product is available, you can activate the More Info button, situated at the bottom centre of the screen.

To have Seeing AI read the additional information aloud, activate the "Play" button, situated at the bottom left corner of the screen. Upon doing this, the button changes to become the "Stop" button.

When you have finished with the Product channel, activate the "Back" button, situated at the top left corner of the screen. Then, activate the "Close" button, also situated at the top left corner of the screen.

The Person Channel

The Person channel is represented by an icon at the bottom of the screen, depicting a cartoonlike character. It allows you to scan your surroundings using the rear-facing camera on your device, to find out how many people are around you, how close they are and their facial expressions.

If you've taught Seeing AI to recognise a particular person, their name will be announced when they come into view. You can teach Seeing AI to recognise people by activating the Face Recognition button, situated at the left of the screen, to the left of the Take Picture button. Upon doing this, the "Recognisable People" screen will be displayed. Next, locate and activate the "Add" button, situated at the top right corner of the screen. You will need to take 3 photos of a person, at slightly different angles. When you've done this, you can assign a name to the photo! Finally, activate the "Back" button to return to the Seeing AI main screen.

Note 8: Always ask permission before taking a photo of a person's face. Additionally, ask if they mind if the photo is stored on your device and tell them the reason why you want to do this!

Seeing AI will also tell you audibly, the position of each face it detects, which can be helpful for centring a person in the camera's view. To take a photo, activate the "Take Photo" button, situated at the centre of the screen, just above the Describe tab.

If you want to take a Selfie, activate the "Switch to Front Camera" button, situated at the right side of the screen, just above the More tab. Then point the camera at yourself, with your iPhone around 12 inches away and activate the Take Photo button.

The Currency Channel

The Currency channel is represented by an icon at the bottom of the screen, depicting a US dollar bill. It allows you to recognise bank notes, in a wide range of currencies! The default currency should be British Pounds.

To find out the denomination of a bank note, hold the rear-facing camera over a bank note. When Seeing AI has recognised the value, it will announce it. If you want to recognise currency other than British pounds, activate the "Recognition" button, situated at the right edge of the screen. Upon doing this, a screen will be displayed consisting of a list of 19 different currencies. Choose the desired currency and start over again!

Currency recognition is pretty accurate, but sometimes it can make mistakes. As identifying bank notes accurately is very important, it is recommended that you have someone you trust confirm the value of each bank note if you are unsure!

Note 9: Seeing AI will not differentiate between real and counterfeit currency.

The Find My Things Channel

The Find My Things channel is represented by an icon at the bottom of the screen, depicting a square, with an arrow in each corner. It enables you to locate the personal objects that matter to you most. This may be useful if you have dropped your keys or wallet on the floor, your earbud rolled off the table or someone moves your bag.

To help Seeing AI recognize your personal things (such as your bag, rather than bags in general) you must first teach Seeing AI what your object looks like. To do this, first activate the "Teach New Object" button, situated at the left side of the screen, just above the Read tab. Upon doing this, you will be prompted to enter the name of the object. Use the virtual keyboard, situated at the bottom of the screen, to type the name of the object. When you have typed the name, activate the Done button, situated at the bottom right corner of the virtual keyboard.

Next, you will need to activate the "Get Started" button. This will start the process of you identifying your object to Seeing AI. You will need to take four short videos! Follow the onscreen prompts until the object has been identified. Seeing AI will help you through this process! When the object has been fully recognised, you will receive a message stating this. Activate the "Close" button, situated at the top left corner of the screen to return to the Seeing AI main screen.

To find the object, activate the "My Objects" button, situated at the right side of the screen, just above the More tab. From the resulting list of objects, select the object you want to find. Upon doing this, you will be presented with three options - Find, Rename and Delete. Activate the "Find" button at this stage. You can now use the rear-facing camera on your iPhone to scan your surrounding area and find the object. As you get nearer to the object, a series of beeps sound, to indicate you are heading in the right direction. You will also hear announcements from Seeing AI informing you how far away from the object you are. When the object is very close, Seeing AI will inform you that it is in front of you. Please remember that the app is not aware of furniture in the room, so please use your usual navigation skills.

Once you have located the object, activate the "Done" button, situated at the bottom of the screen, then the Close button, situated at the top left corner of the screen. This will result in you being returned to the Seeing AI main screen.

This feature operates entirely on your device, and none of the videos you record will leave your iPhone!

The World Channel

Note 10: The World Channel is only available on Pro models of the iPhone. These devices have a LIDAR (Light Detecting And Ranging) sensor installed.

The World channel features the latest Artificial Intelligence and Augmented Reality to explore an unfamiliar environment in 3-D using spatial audio.

The World channel recognises people and objects in a room as well as their 3-D position. You can also create routes through the environment for yourself or someone else to follow later. This work is still experimental, so please use caution.

Scan the room by slowly moving your phone around, keeping your device upright, with the screen towards you. Be sure to also look in the same direction as the camera for spatial audio, unless using headphones that support head tracking. You will hear the names of

objects which are detected as they come into view. When wearing headphones, you will hear object names spoken from their location in the room, such as the word "chair", coming from the chair itself.

You can customise the information you hear, by activating the "filters" button, situated at the left side of the screen, just above the Read tab. You can turn on/off real-time announcements of people and/or other objects on devices which support haptics. You can also turn on the proximity sensor to feel a deep rumbling indicating the distance to things around you - the closer the surface, the more intense the rumbling!

After scanning the environment, choose Spatial Summary from the "Actions" menu, situated at the right side of the screen, just above the More tab, to hear all detected objects around you.

The Colour Channel

The Colour channel is represented by an icon at the bottom of the screen, depicting an artist's colour palette. It allows you to find out the perceived colour of an object. Be aware that this will depend on several factors. Colours appear darker when there is less light, or if the object is in shadow; a white surface may appear slightly yellowish when the lights are on!

Point the rear-facing camera on your device at the object or article of clothing and Seeing AI will attempt to tell you the colour of the object/article of clothing. For best results, hold the device approximately 12 inches away!

The Light Channel

The Light channel is represented by an icon at the bottom of the screen, depicting a shining sun. It is designed to let you detect how much light there is in your environment, using tones emitted from your device. The pitch of the tone is based on how much your device sees. The more light there is, the higher the pitch of the tone!

Note 11: Be aware that using some of Seeing AI's features, such as the Short Text, Document and Colour Detection channels, requires use of the torch. This can greatly impact on battery life.

This is the end of the introduction to Seeing AI. If you want to find out more about Seeing AI, contact the author, Gary Eady, using the following email address.

technology@sightforsurrey.org.uk
