

# Meta Ray-Ban SmartGlasses

## Changing the Voice (Android)

This document guides you through the process of changing the voice used by the Meta Ray-Ban SmartGlasses.

**Note 1:** The instructions given in this document have been created using a Samsung Galaxy S21 Smartphone, running Android 15.0. If you are using a non-Samsung device, or a later version of Android, you may find some minor differences. However, it isn't anticipated that you will!

To change the voice used by the Meta Ray-Ban SmartGlasses, follow these steps:

**Note 2:** The following instructions have been created using the Meta AI app, version 267.1.0.67.173.

1. Open the Meta AI app.
2. In the Meta AI app, activate the "Menu" button, situated at the top left corner of the screen. Upon doing this, a menu will be displayed.
3. From the menu, activate the "Settings" button, situated at the bottom of the menu. Upon doing this, the Settings screen will be displayed.
4. In the Settings screen, activate the "Voice" button. For reference, this is situated directly beneath the Meta AI heading. Upon doing this, the Voice screen will be displayed.
5. By default, you will find 11 voices available. Others may be available if you have a later version of the Meta AI app installed. There is a button for each voice, which plays a sample of the

voice. Activate each of the buttons to find out what they sound like. The last voice you play will become the new voice for your Smart Glasses.

6. When you have decided on a voice, activate the "Back" button, situated at the top left corner of the screen. Upon doing this, you will be returned to the Settings screen.
7. Finally, activate the "Close" button, situated at the top left corner of the screen. Upon doing this, you will return to the main Meta AI screen.

That's it, you've successfully changed the voice used by your Meta Ray-Ban SmartGlasses.

If you require further information about your Meta Ray-Ban Smart Glasses, contact the author, Gary Eady, using the following email address.
